Lisa Players

Future-proof internet audio players

The Lisa is Streamit's flagship audio player for business audio. This internet device is developed in-house and is the result of an evolution of more than 20 years development of professional audio players. It can be used for streaming with or without backup from SD card as well as through the "rock solid" store-and-forward mechanism. The Lisa delivers targeted music, messaging and advertisements for music providers and retailers.

The Lisa is a fully autonomous audio player. It automatically reconnects after streaming or power failure and has a large audio buffer to bridge the gap. In case of network failure the Lisa falls back automatically to the music on the SD card in the player. The Lisa offers high audio quality even with limited bandwidth.

Streamit audio players are easy to exploit with our cutting-edge Claudio audio distribution platform. Integration with other music distribution systems is likewise supported. With a detailed Technical Manual, a free PC-tool for device configuration, a tool for music track encryption and our experienced support team it paves the path for a successful integration in the way you want.

The Lisa control interface allows you to manage and control the Lisa seamlessly via your own mobile app.

Lisa LCD

The Lisa LCD is a fully featured streaming audio player. It has an LCD display with keys enabling user input on the work floor. So, if desired, locally monitoring and switching between streams or channels is made possible. For the Lisa LCD optionally an infrared remote control and 19" rackmount kit are available.

Lisa Compact

The Lisa Compact has the same functionality as the Lisa LCD, but without LCD display and keys. This device is designed to function as a fully remote-controlled player.
